Monolit		
Technical data		Monolit
Type of floor covering	EN 649	Homogeneous single layered low maintenance vinyl flooring
Classification	EN 685	Commercial: 34 Industrial: 43
Wear layer thickness	EN 429	2.0 mm
Polyurethane reinforced		yes
Total thickness	EN 428	2.0 mm
Weight/m²	EN 430	approx. 3.1 kg
Abrasion/thickness loss (PrEN 660: Part 1)	DIN 51963	approx. 0.15 mm
Abrasion/resistance (PrEN 660: Part 2)	SIS 92 35 09	3.50 mm³
Residual indentation	EN 433	≤ 0.10 mm
Wear by chair castors	EN 425	suitable
Underfloor heating		suitable
Electrical resistance	DIN 51953	≥ 10 <sup>10</sup> Ohm
Flame spread	DIN 4102	B1
Colour fastness	ISO 105-B02	≥ level 6
Chemical resistance	EN 423	good resistance
Colours		24
Form of delivery	Sheet (rolls)	approx. 25 running metres x 200 cm art. no. 3715 _ _ _ 5 3 digit colour number

Tarkett Sommer's instructions concerning adhesive, installation, cleaning and maintenance should be observed. Please contact Tarkett at the address shown for these instructions. NB: Polyurethane (PUR) reinforced surface. Therefore no seals, waxes or polishes need ever be applied to Monolit.

# Monolit

Highest quality in every respect.

Wear-resistant, easy to care for and hygienic.

**Monolit** derives its name from the Greek word *monólithus* meaning "a large object formed from a single piece of material, e.g. a stone block". Although Monolit is not made of stone, the impression is of a material which is just as pure, beautiful and fresh.

When first impressions are important, Monolit is the obvious choice. Seen here is an elegant version of Monolit in colours 922 (light-green), 924 (dark-green), 910 (light beige), 925 (light peach).

# Highest quality in every respect.

**Wear-resistant, attractive  
and easy to care for.  
But above all from Tarkett Sommer.**

Monolit is a flooring based on decades of knowledge of what is needed to meet all the professional requirements for wear-resistance, hygiene, ease of maintenance, design and economy, while at the same time paying maximum consideration to the environment by reducing the need for chemicals and water in cleaning work.

In order that it may carry the Tarkett Sommer name, the flooring must fulfil the tough requirements set for public areas, such as hospitals, schools, nursery schools, public establishments, offices, etc.

**Tarkett Monolit.  
The first vinyl flooring  
in the new generation.**

Monolit is reinforced with PUR (polyurethane), exactly the same as all high quality low maintenance flooring from Tarkett Sommer.

There are two reasons for this.

The first is that years of public research have shown that flooring from Tarkett Sommer with PUR allows daily cleaning to be completed with dry/damp cleaning methods, which simplifies cleaning work considerably.

Secondly, the need for cleaning chemicals is reduced by as much as 80%, since no chemical additives are needed to meet the requirements for hygiene set by, for example, hospitals, schools, laboratories, etc.

At the same time the use of water is reduced by half, thus saving both costs and the environment, reducing the risk of injury as a result of slipping, and economizing on natural resources. Heel marks and stains are easy to remove and the floor looks generally cleaner.

The simple cleaning methods have another great ergonomic advantage in that the risk of wear and tear to the cleaners' arms and shoulders is reduced considerably.

**Easy to care for,  
inexpensive to own.**

Monolit belongs to the type of flooring which is economic to own. The reason is naturally the comparatively very low running costs, since the flooring does not need to (neither should it) be treated with polish or wax year after year. There-fore there are no residues of previous treatment layers to be removed.

Unfortunately, there are still those who choose flooring based on price alone, without taking into consideration the fact that the cost of caring for a floor over its lifetime, is on average, ten times its purchase price.

Those who are interested both in sparing the environment and reducing future maintenance costs choose wisely

- and have money left over for other, and more profitable, investments.

**Easy to lay  
– no specific direction.**

Like all flooring from Tarkett Sommer Monolit also has a great advantage when it comes to installation. The seams are heat welded with matching thread which provides a watertight and hygienic installation. The flooring can be easily moulded and coved up walls and round corners.

Furthermore, Monolit can be laid in any direction, which makes laying even easier.

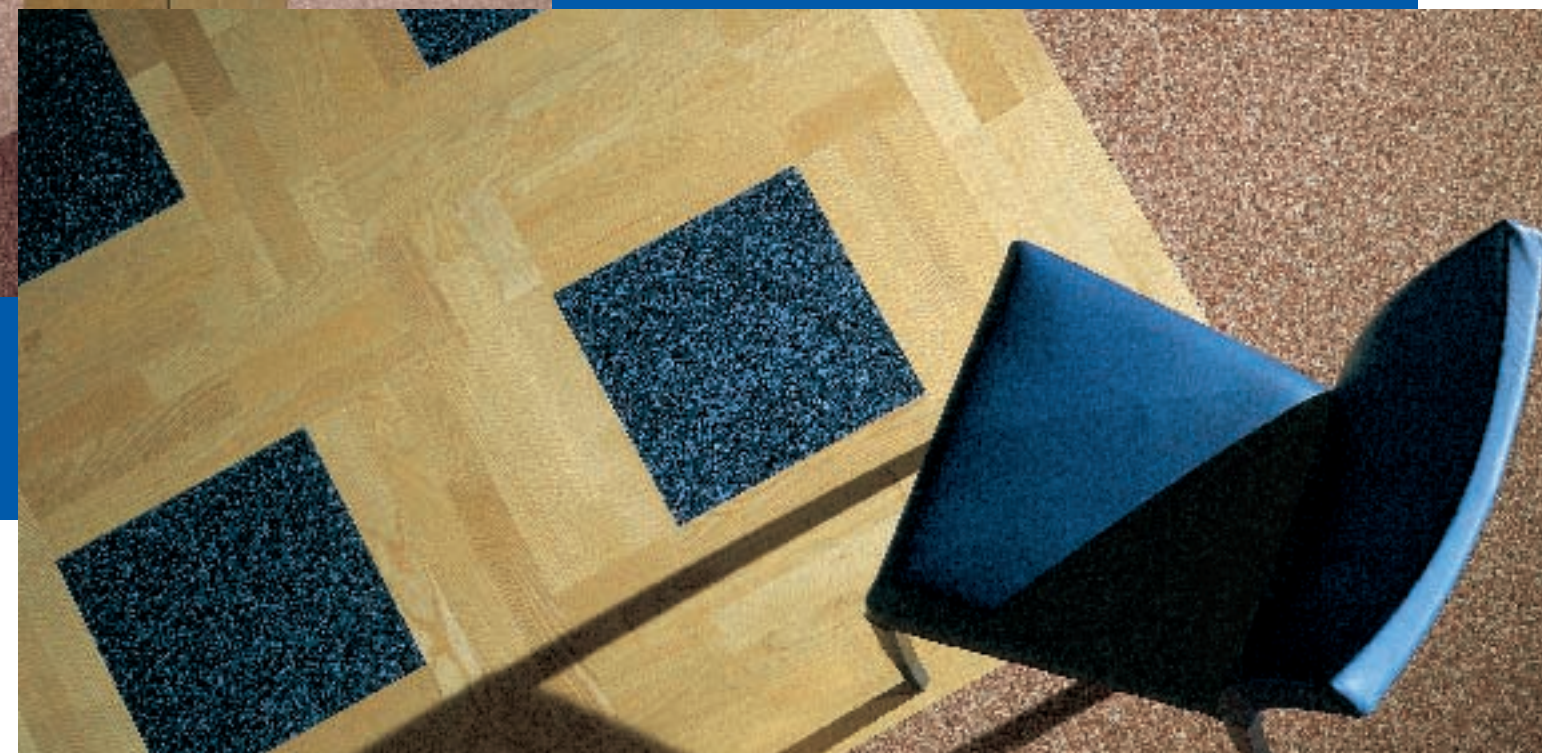

Tarkett supply technical support, printed installation and cleaning instructions and instruction videos to ensure a good end result.

Present day shops are more than merely places where goods are sold. It is just as important today to reflect the concept as a whole.

Flooring from Tarkett Sommer invites a wide range of design solutions. As in this elegant example, where Monolit in the colours 917 (medium pink) and 921 (dark blue) blend well with Tarkett Sommer Design hardwood flooring in ash wood.

Monolit is a flooring suitable for environments with a great deal of traffic. The flooring is not only durable but also gives great flexibility with respect to design and installation. The fact that the material can be installed in any direction enables exciting floor surfaces to be created which give a lift to the entire interior.

The illustration shows a design with Monolit 921 (dark blue), 931 (medium grey), 925 (light peach), 926 (medium peach).

Where people meet, there too Monolit has its natural place. Here it is installed in an elegant arena setting in the colours 931 (medium grey), 933 (black). The stage flooring is Tarkett Birch Diamond, 10 mm.

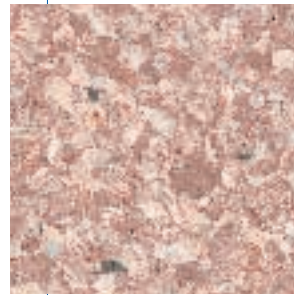

# Unique colour system ensures beautiful floors.

In the process of developing the Monolit collection we have taken inspiration from the colours of vegetation, rocks and the ground itself. Another recurrent concept is that the various colourways can be combined to form an endless and harmonic display.

The result is a total of 24 colourways, of which there are 6 colour families in 3 different hues (light, medium, dark). There are also

2 cool and 3 warm greys, plus 1 black to complete the picture.

The same basic pigment is to be found in all 24 colours, which makes it rewarding to make pattern dispositions that not only create harmony but also floors providing a psychological lift.

# Tarkett Sommer – another word for innovation.

Taking a new approach to a situation is characteristic of the Tarkett Sommer flooring company. In area after area we have been the innovators whom others have followed.

We developed resilient flooring that is still unsurpassed today with respect to simplicity of cleaning and the need to use the minimum of chemicals and water. We pointed out, at an early stage, the importance of looking at the cost of flooring over its entire life-cycle

instead of just considering only the purchase price.

## **World leaders in flooring.**

Tarkett Sommer, which was founded in Sweden just over 100 years ago, has grown into a leading international flooring company with an annual production of 200 million square metres of hardwood and resilient flooring, wet room wall coverings and vinyl sheeting. Or, in other

words, a surface area equal to 34,000 football pitches.

## **Worldwide customers.**

Wherever you travel in the world the chances are that you will set foot on quality flooring from Tarkett.

Some of the many well-known successful companies who have chosen Tarkett as a flooring supplier are IKEA, Glaxo, Tetra Pak, Karstadt, Marks & Spencer, etc.
